Applicant : William A. Sirignano
Appl. No. : 10/766,132
Examiner : Sarah Sachie Clark
Docket No. : 703538.4032

## Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

- A miniature combustor comprising: 1. (currently amended)
- a chamber having first and second ends,
- a liquid-fuel inlet into the chamber,
- a gas inlet formed in a first end of the chamber, and
- a means for forming a stable liquid film on the chamber's interior surface to reduce the combustion heat losses to a chamber wall to avoid flame quenching,

wherein the chamber having a lateral dimension transverse to a major flow direction within the chamber that is sub-centimeter.

- 2. (original) The combustor of claim 1 wherein the lateral dimension is in a range of about 1.0 to 3.0 millimeters.
  - 3. (original) The combustor of claim 1 wherein the chamber is generally cylindrical.
- 4. (original) The combustor of claim 1 wherein the length of the chamber is in a range of about 1.0 to 10.0 centimeters.

Applicant : William A. Appl. No. : 10/766,132 Examiner : Sarah Sachi 703538.4032 Docket No.

5. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a fuel injector oriented to eject fuel onto a surface within the chamber.

- 6. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises at least a portion of a chamber wall formed of a porous material.
- 7. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a plurality of orifices.
- The combustor of claim 7, wherein the means for forming a 8. (currently amended) stable liquid film further comprising comprises a plurality of liquid fuel injectors, each coupled to one of the plurality of orifices and oriented tangentially to a wall of the chamber and orthogonally to the major flow direction within the chamber.
- 9. (original) The combustor of claim 8 wherein the plurality of liquid fuel injectors comprise first and second set of injectors wherein the first and second set of injectors are symmetrically opposed about the chamber.
- The combustor of claim 1 wherein the means for forming a 10. (currently amended) stable liquid film further comprising comprises a swirl generator.

Docket No. : 703538.403

703538.4032

11. (original) The combustor of claim 10 wherein the swirl generator comprises a swirler positioned within the chamber adjacent the first end.

12. (original) The combustor of claim 10 wherein the swirl generator comprises a plurality of gas inlets tangentially coupled to the chamber adjacent the first end of the chamber.

13-14. (cancelled)

A combustion process comprising the steps of 15. (currently amended) injecting liquid into a combustion chamber, wherein the chamber has a lateral dimension transverse to a major flow direction within the chamber that is sub-centimeter,

forming and maintaining a stable liquid film over substantially an entire interior surface of the chamber to reduce the combustion heat losses to a chamber wall to avoid flame quenching, injecting an oxidizing gas into the chamber, and

burning an oxidizing gas and fuel mixture within the chamber.

- 16. (original) The method of claim 15 wherein the liquid is a fuel.
- 17. (previously presented) The method of claim 16 wherein the liquid is an inert liquid and the fuel mixture comprises a gaseous fuel.
  - 18. (cancelled)

 703538.4032

The method of claim 15 further comprising the step of 19. (previously presented) swirling the oxidizing gas.

- 20. (original) The method of claim 15 wherein the step of forming and maintaining a liquid film over substantially an entire interior surface of the chamber, includes reducing combustion heat losses to walls of the chamber.
- 21. (original) The method of claim 15 wherein the step of injecting an oxidizing gas includes injecting the oxidizing gas axially into the chamber and swirling the axially in-flowing gas by passing it through a swirl generator positioned adjacent to an inlet of the chamber.

22-25. (cancelled)
